

LaTeX Environment

LaTeX Environments

The contents of this div will be output in a `center` LaTeX environment, but will appear in HTML (and any other output format as a simple div with the class `center`)

LaTeX Commands

Will replace spans of class `ce` with the `\ce{}` command for LaTeX output, but leave the spans intact for HTML output. So `[H2S04]{.ce}` becomes H_2SO_4 .

Advanced Environments and Commands

You can also combine environments and commands (with options) to address more complex scenarios. Usually with LaTeX: `* [opts]` is used for optional arguments `* {args}` for mandatory arguments

Both environments and commands can accept an `options` and `arguments` attributes which will be properly applied in LaTeX and will be available as an attribute in HTML output.
